
(1) surface: elastic stress, normal and shear, $\nabla\cdot\boldsymbol{\tau}$

(2) surface: pressure on all sides, $-\nabla(\rho_0\,\mathbf{u}\cdot\nabla\Phi_0)$

(3) body: weight of density change, $\nabla\cdot(\rho_0\mathbf{u})\,\nabla\Phi_0$

(4) body: moved mass and tide, $-\rho_0\nabla(\phi_1+\phi_T)$
